

System and Method of Self-Properties for an Autonomous and Autonomic Computer Environment

Case Number: GSC- 15038-1
Patent Number: 7,765,171
Patent Exp. Date: 6/27/2026

DESCRIPTION

This computer-accessible medium stores instructions for transmitting self and environment health/urgency data. The self health/urgency data is received from a self control loop component of the autonomic element. The environment health/urgency data is received from an environment control loop component of the autonomic element. The self and environment health/urgency data are encapsulated in a packet. Event message data is transmitted in addition to the self and environment health/urgency data.

FEATURES AND BENEFITS

- The technology reduces processing delays in data sent from autonomic units.

APPLICATIONS

- Transportation
- Space Exploration
- Aviation
